

PigTek CENTRO™ Control (PigCentral Lite) Updated Version

The CENTRO™ control comes WITH the power supply built in – so unlike PigCentral, you do NOT need to order a power supply when you order a Centro control

In the original model of this control, there was room for three modular cards. You had the power supply on top, and three open slots for cards below it:

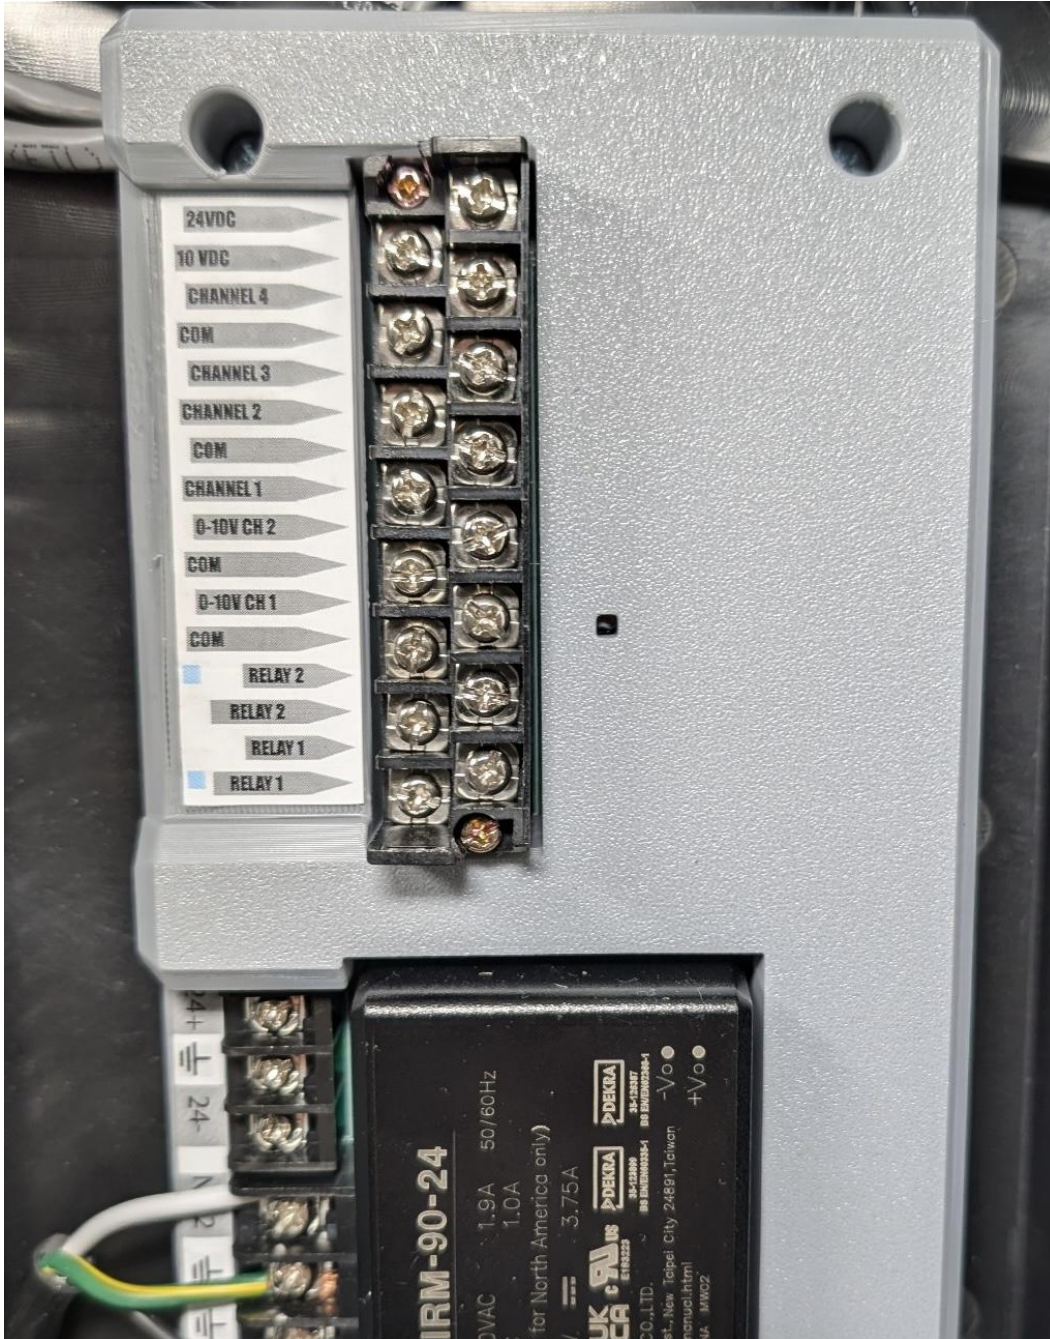

In the upgrade to the Centro, it now looks like this:

In the above photo, on the right side, you now have the Utility Board. The new board includes the power supply (the black rectangle towards the bottom) plus we now offer several contact terminals (see close up photo) so this will help eliminate the number of cards you might need. Now, on the left, you have room for FOUR additional expansion cards.

Close up of the Utility Board - built-in power supply and terminals:

This new added Utility board includes: (4) universal inputs, (2) 0-10V out, (2) small relay out, and power supply.

Another new product: **External Triac Box**

Dual Variable Triac, External Box

Includes (2) Universal Input Terminals

(2) 15 amp TRIAC Output Terminals

And Power Supply
